Note:

Town: Refers to the town with the closet euclidean distance ("as the crow flies") to the organization

Name: A name from Google Maps of the Organization

Rate: The number of Google ratings

Rating: the average Google Maps rating

Dist: the distance from the nearest town ("as the crow flies")

Azi: The azimuth FROM the town TO the organization

Be weary of these distance measurements; the true road distance in most instances will be greater.

The location they are measured from is the geographic center of town, not a sensible region like cross streets.

Locations have not been QA/QC'ed use common sense, some of these providers clearly suck.
